1966 North & South bound spans completed

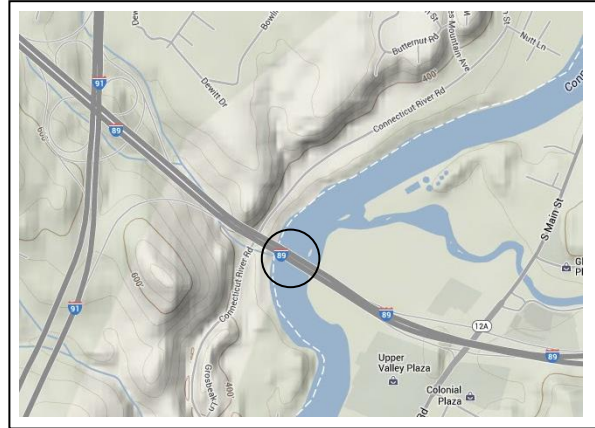

FIGURE 1: Northbound I-89 on left, southbound on right (Historic Documentation Company Inc. 2013).

CROSSING HISTORY

First bridge: The northbound and southbound bridges at this location were both constructed as elements in the same Interstate Highway project, completed in 1966. The New Hampshire DOT designed the bridge, contractor for the project was E.D. Swett, Inc. The two bridges, each 847 feet in length, are six-span continuous steel plate girder structures supported by cantilevered abutments and piers of reinforced concrete. The decks of these bridges were rehabilitated in 1998.
